REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The claims are allowable over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that of a vacuum actuated automatic door latching assembly for unlocking a door of a delivery vehicle, comprising a latch operatively associated with the door for latching the door, the latch movable between the lock and unlocked positions; a pneumatic actuator operatively associated with the latch for causing the latch to move between the locked and unlocked positions; a vacuum line connected to the pneumatic actuator and adapted to connect to a vacuum source associated with the vehicle; a control valve disposed between the vacuum source and the pneumatic actuator for controlling the activation of the pneumatic actuator; and a biasing device engaging the door and biasing the door towards an open position; wherein the device includes a spring; and wherein the spring is adapted to extend between a stop disposed on the door and an area adjacent the door, and wherein the position of the spring is adjustable with respect to the door.

The prior art of record, U.S. Patent Number 3,016,968 to Lenz et al., disclose a vacuum actuated door latching assembly having a latch (figure 2) operatively associated with the door (1), a pneumatic actuator (26) operatively associated with the latch for causing the latch to move between the locked and unlocked positions, a vacuum line (37) connected to the pneumatic actuator and adapted to connect to a vacuum source (41) associated with the vehicle, and a

Art Unit: 3673

control valve (39) disposed between the vacuum source and the pneumatic actuator for controlling the activation of the pneumatic actuator.

However, Lenz et al. does not disclose a biasing device adapted to extend between a stop on the door and an area adjacent the door.

Additionally, the prior art of record, U.S. Patent Number 4,170,374 to Garcia, discloses a delivery vehicle (1) having a latch assembly (22) for latching an access door (20) to a load compartment (26) having an engine for powering the vehicle (not shown but having an engine is inherent in motor vehicles), a latch assembly (22) comprising a latch (30) operatively associated with the door for locking the door, the latch being movable between a locked and unlocked position (column 2, lines 60-66), an actuator (34) operatively associated with the latch for causing the same to move between the locked and unlocked position (column 2, line 66-column 3, line 3), and a biasing device (49) for engaging the sliding door and biasing the door towards an open position (the spring force urges the keeper, an integral part of the door, toward the open position of the latch), the biasing device being spaced from the latch assembly (figure 2) and operable independently of the latch assembly (the biasing acts directly opposite and independent of the latching motion, wherein the spring biases the latch against the force of the door), and wherein the biasing device includes a spring (54).

However, Garcia does not disclose the latching assembly is vacuum actuated.

Art Unit: 3673

Moreover, in combination, Lenz and Garcia do not disclose the spring being adapted to extend between a stop disposed on the door, i.e. making direct contact with the stop, and an area adjacent the door

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
